

7002-HD

High Density Switch Mainframe and Cards

- Cost-effective, high density switch mainframe and cards
- High density, half-rack switching mainframe, just 2U (3.5 in) high
- Differential 6×32 matrix card
- Differential quad 1×40 multiplexer card
- Analog backplane simplifies constructing larger matrix or multiplexer configurations
- Designed for easy integration with Keithley DMMs or SourceMeter® instruments
- 200V, 1A signal handling capacity
- GPIB/IEEE-488 and Trigger Link interfaces

The Model 7002-HD switch mainframe and high density switch cards provide a cost-effective, high density switching solution in a half-rack, 2U enclosure. This combination of compact size and high switching density makes the Model 7002-HD system one of the best switching values in the test and measurement industry.

The two-slot Model 7002-HD mainframe is an extension of the design used in Keithley's proven Series 7000 mainframes, combining the channel density of the ten-slot Model 7002 with the half-rack footprint of the Model 7001. To exploit the Model 7002-HD's high density architecture, Keithley has designed two new high density switch cards: the Model 7002-HD-MTX1 Differential 6×32 Matrix Card and the Model 7002-HD-MUX1 Differential Quad 1×40 Multiplexing Card. Matching or mixing these cards in the mainframe makes it simple to create a switch system with up to 384 matrix crosspoints or 320 multiplexer channels in a single half-rack, 2U (3.5 inch) instrument footprint.

Easy to Set Up, Simple to Operate

The Model 7002-HD's similarity to other Series 7000 mainframes simplifies system setup and programming—it shares the same operating firmware with the Model 7002. It's simple to program or operate the Model

7002-HD via either the front panel controls or over the IEEE-488 interface bus. This high density switch system is designed for easy integration with Keithley's Series 2000 Digital Multimeters and Series 2400 SourceMeter® instruments, providing a range of low cost, tightly integrated measurement packages.

Build Large Configurations Easily

An analog backplane in the Model 7002-HD mainframe can be used to make connections between cards when building large matrix or multiplexer configurations. The backplane eliminates intercard wiring, allowing greater configuration flexibility and higher signal integrity.

Built-in Scan Control

A built-in scan control function eliminates the need for the external controller to manage every step of the test procedure. It's easy to program the Model 7002-HD to control the channel spacing, scan spacing, and number of scans.

Store 500 Complete Switch Patterns

The Model 7002-HD has a non-volatile memory for saving and recalling relay setups, even after a power loss. Up to 500 switch patterns can be recalled and used directly from memory or used as part of a scan list. Sequencing through switch patterns in memory saves test time by eliminating the need to transfer this information over the GPIB bus, improving system throughput.

Trigger Link

Keithley's unique Trigger Link high speed trigger bus, included in virtually all modern Keithley instruments and switch mainframes, provides simple trigger coordination between different types of instruments. By providing access to six independent hardware trigger lines on a single cable, this bus eliminates GPIB communication delays during scanning, boosting overall system throughput.

APPLICATIONS

The Model 7002-HD mainframe and cards are well suited for a variety of high density switching applications, including:

- Testing isolated and bussed resistor networks
- Wafer-level functional I-V testing
- Multi-terminal component testing
- Component array testing
- OLED array/stress testing
- Resistance/leakage testing

High Density Switch Mainframe and Cards

Model 7002-HD-MUX1 High Density Multiplexer Card

Each Model 7002-HD-MUX1 Differential Quad 1×40 Multiplexing Card has four 1×40 (two-pole) multiplexers, providing a total of 160 multiplexer channels per card. In addition, a unique 4×4 instrument connection matrix supports reconfigurable instrument connections. This instrument connection matrix connects to each of the four 1×40 multiplexer banks, allowing the card to be programmed as a quad 1×40, dual 1×80s, a single 1×160, or a 4×160 blocking matrix. In addition, each bank of multiplexers can be linked through a software configurable backplane relay, allowing even more configuration flexibility.

High Density Switch Mainframe and Cards

Model 7002-HD-MTX1 High Density Matrix Card

Each Model 7002-HD-MTX1 card provides a differential 6 row by 32 column non-blocking switching matrix. Each row is connected to the mainframe's analog backplane by software configurable isolation relays, so a single mainframe can provide a 6 row by 64 column matrix. This reduces the number of interconnecting cables required, which helps maintain signal integrity in high density matrix systems. Similarly, an external row connection allows easy matrix expansion between two or more 7002-HD mainframes.

SWITCHING AND CONTROL

7002-HD

High Density Switch Mainframe and Cards

7002-HD High Density Switch System Specifications

SYSTEM

EXPANSION: Two plug-in cards per mainframe

CARD COMPATIBILITY: Compatible with 7002-HD-MTX1 and 7002-HD-MUX1 cards

MEMORY: Battery backed-up storage for 500 channel patterns

SWITCH SETTling TIME: Automatically selected by the mainframe. Additional time from 0 to 99999.999 seconds can be added in 1ms increments.

INPUT TRIGGER SOURCES:

IEEE-488 bus (GET, *TRG).

Trigger Link (external trigger).

Manual (front panel).

Internal Timer, programmable from 1ms to 99999.999 seconds in 1ms increments.

CHANNEL READY OUTPUT: Trigger Link.

SWITCHING SEQUENCE: Break-before-make [On (Default) / Off].

ANALOG BACKPLANE

SIGNALS: 32 single pole paths. These signals provide matrix and multiplexer expansion between cards within one mainframe.

GENERAL

DISPLAY: Dual-line vacuum fluorescent. 1st line: 20-character alphanumeric. 2nd line: 32-character alphanumeric.

REAR PANNEL CONNECTORS: IEEE-488, 8-pin micro DIN connector for Trigger Link, 8-pin micro DIN connector for Trigger Link expansion.

POWER: 100V to 240Vrms, 50/60Hz. 50VA maximum (mainframe only). 150VA maximum (mainframe with two cards at maximum closed channels).

WARRANTY: 1 year.

EMC: Complies with European Union Directive 89/336/EEC, EN61326-1.

SAFETY: Conforms to European Union Directive 73/23/EEC, EN61010-1.

OPERATING ENVIRONMENT³:

7002-HD Cards	Maximum Closed Channels ⁴	Temperature	Humidity
MTX1	150	0°C to 50°C	50% RH at 35°C
MUX1	150	0°C to 50°C	50% RH at 35°C

STORAGE ENVIRONMENT: -25°C to 65°C.

ALTITUDE: Maximum 2000m above sea level.

RACK MOUNT DIMENSIONS:

Configuration	Height	Width	Depth
7002-HD	89mm (3.5 in.)	213mm (8.375 in.)	537mm (21.125 in.)
Installed MTX1	89mm (3.5 in.)	213mm (8.375 in.)	562mm (22.125 in.)
Installed MUX1	89mm (3.5 in.)	213mm (8.375 in.)	562mm (22.125 in.)

WEIGHT: <5.7 kg (12.6 lb)

7002-HD NOTES

- 1 Display off.
- 2 Time from the output of a Channel Ready pulse until a new External Trigger will be accepted on the 8-pin micro DIN connector.
- 3 For indoor use only.
- 4 Refer to card user's guide for measurement considerations.
- 5 External Trigger speed includes the time to output a Channel Ready pulse and the re-trigger hold-off time.

7002-HD

High Density Switch Mainframe and Cards

7002-HD-MUX1 Differential Quad 1×40 Multiplexer Card Specifications

GENERAL

RELAY SWITCH CONFIGURATION: Differential Quad 1×40 multiplexers with programmable multiplex expansion and matrix input switching.

RELAY TYPE: Double pole form A (DPST) electromechanical relays.

RELAY DRIVE CURRENT: <35mA per channel.

RELAY ACTUATION TIME: <3ms.

FIRMWARE: Specified for Model 7002-HD.

EMC: Conforms to European Union Directive 89/336/EEC, EN61326-1.

SAFETY: Conforms to European Union Directive 73/23/EEC, EN61010-1.

INPUTS

MAXIMUM SIGNAL LEVEL: 200VDC or 200Vrms (283V peak for AC waveforms), 1A switched, 60W 125VA maximum.

COMMON MODE VOLTAGE: 200VDC or 200Vrms (283V peak for AC waveforms) between any terminal and chassis.

CONNECTOR TYPE:

Matrix Inputs: 5mm removable screw terminals (supports 18–22AWG wire). Supplied with removable screw terminals.

7002-HD Cards	INDIVIDUAL CHANNELS		CHANNEL PATTERNS		Re-Trigger Hold-off ²
	External Trigger Rate	External Trigger Speed ⁵	External Trigger Rate	External Trigger Speed ⁵	
MTX1	<128/s	>7.9 ms	<100/s	>10.0 ms	>0.5 ms
MUX1	<128/s	>7.9 ms	<100/s	>10.0 ms	>0.5 ms

Multiplexer Outputs: 5mm removable screw terminals (supports 18–22AWG wire). Supplied with removable screw terminals.

Multiplexer Inputs: 40-pin male IDC compatible headers.

CONTACT LIFE: >10⁸ operations at no load.
>10⁵ operations at rated load (resistive load).

MULTIPLEXER CONFIGURATION

	Quad 1×40	Single 1×160 ⁵	Single 1×320 ⁶
CHANNEL RESISTANCE⁴	<1 Ω	<1 Ω	<2 Ω

ENVIRONMENTAL²

OPERATING ENVIRONMENT: Specified for 0°C to 50°C. Specified to 50% RH at 35°C.

STORAGE ENVIRONMENT: -25°C to 65°C.

WEIGHT: <1.9kg (4.2 lbs).

ALTITUDE: Maximum 2000m above sea level.

RECOMMENDED CONNECTOR/CABLE³

4-PIN REMOVABLE SCREW TERMINAL: RIA Part # 31007104.

5-PIN REMOVABLE SCREW TERMINAL: RIA Part # 31007105.

40-PIN FEMALE IDC SOCKET

Without strain relief (for Mux 1–3): 3M Part # 89140-0101.

With strain relief (for Mux 4): 3M Part # 89140-0100.

LONG SNAP IN LATCH ARMS (for Mux 4): 3M Part # 3505-33.

40-CONDUCTOR SHIELDED/JACKETED RIBBON CABLE: 3M Part # 3517/40.

7002-HD-MUX1 NOTES

- Includes end of life.
- For indoor use only.
- Refer to User's Guide for measurement considerations.
- At end of life, add an additional 1Ω for a single card and 2Ω for two cards.
- For signals routed through a multiplexer and the interconnect matrix.
- Two cards installed in mainframe using analog backplane for expansion.
- For configurations using Mux 4, add 8μV to specification.
